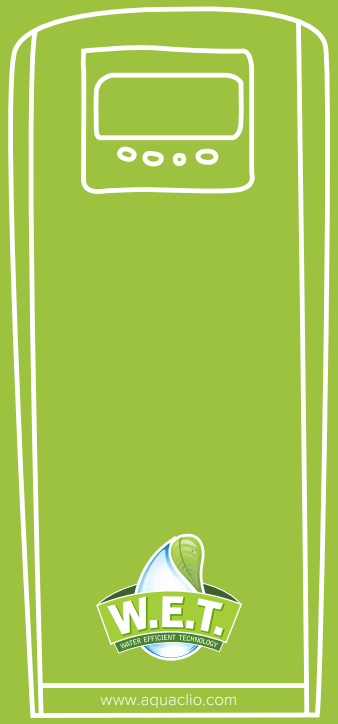
W.E.T.
WATER EFFICIENT TECHNOLOGY

About W.E.T.

Water is a precious resource, that is why AQUACLIO is constantly looking for innovative ways to conserve it. Water Efficient Technology, W.E.T. is a series of features that allows water softeners to use only the amount of water and salt needed, effectively reducing waste and saving money!

Modern water softeners have become more efficient over time, but many still use more resources than are necessary. W.E.T. is capable of saving up to 50 % of the salt and water used by today's up flow high-efficiency systems.



CLEAR BENEFITS

50%

SAVE UP TO **50** % OF SALT

Might vary depending on the application and the specific situation

50%

REDUCE RINSE WATER BY APPROXIMATELY **50** %

Might vary depending on the application and the specific situation

VISUALIZE YOUR SAVINGS

MAINTAIN PERFORMANCE AT ALL TIME

Proportional Brining

Reduces salt used during regeneration to be proportional to the amount of water treated for your household. If less water is processed, less salt is needed.

Proportional Regeneration

Reduces water used by your water softener during the rinse cycles. Much like Proportional Brining, the cycles are adjusted to match how much resin has been exhausted inside your softener.

Alternate Regeneration

Your softener will perform a full regeneration occasionally to maintain its performance. Reducing the salt and water used could cause system fatigue over time, so W.E.T. assigns a full cycle to refresh the complete tank.

Savings History Screen

See how much you saved compared to a traditional high-efficiency system right on your softener. You can see how many kilos of salt and liters of water you've saved since your W.E.T. features were activated.
